

## **Reliant Home Health Releases CHF Re-hospitalization Results with 80% Reduction in Re-hospitalization**

For patient starts of care between January 1, 2011 and May 31, 2011, Reliant Home Health posted a re-hospitalization rate of less than 5%. Re-hospitalization for CHF patients is defined as any patients with the primary diagnosis of CHF that were re-admitted within 30-days of the patient's start of care. The nationwide industry average for CHF re-hospitalizations is 24.5% versus Reliant Home Health's results which show a reduction of over 80%. These results are taken from Reliant Home Health agency data. Please note that due to variances in sample size of patients, significant swings in results can occur on a month-to-month basis. Reliant Home Health makes no promises that all patients will see these results. Reliant Home Health is committed to providing the best possible clinical outcomes using customized disease management protocols for all our patients. For more information on how you can partner with Reliant Home Health to lower your re-admission rates, please contact Judy Wilson at 210.558.9606 or [judy@relianthomehealth.com](mailto:judy@relianthomehealth.com)
